

PIC16F506 Rev. C0 Silicon Errata and Data Sheet Clarification

The Rev. C0 PIC16F506 devices that you have received conform functionally to the current Device Data Sheet (DS41268**D**), except for the anomalies described in this document.

The silicon/specification issues discussed in the following pages are for silicon revision C0. If questions arise concerning the silicon revision received in a particular factory shipment, please contact your local Microchip sales office for assistance.

Silicon Errata Issues

Data Sheet Clarifications

The following typographic corrections and clarifications are to be noted for the latest version of the device data sheet (DS41268**D**):

Note:	Corrections are shown in bold . Where						
	possible, the original bold text formatting						
	has been removed for clarity.						

1. Module: Analog-to-Digital Converter (ADC)

For the PIC16F506, the specifications listed in Table 1 below supersede Table 13-3 in the device data sheet (DS41268**D**). These changes do not apply to the PIC12F510, which is also described on data sheet DS41268**D**.

Param No.	Sym.	Characteristic	Min.	Typ† Max.		Units	Conditions
A03	EIL	Integral Error	_	_	±1.5	LSB	VDD = 5.0V
A04	Edl	Differential Error	_	_	-1 < EDL ≤ +1.7	LSB	VDD = 5.0V
A06	EOFF	Offset Error	_	_	±1.5	LSB	VDD = 5.0V
A07	Egn	Gain Error	_	_	-0.7≤ EGN ≤+2.2	LSB	VDD = 5.0V

TABLE 1: A/D CONVERTER CHARACTERISTICS

† Data in "Typ" column is at 5.0V 25°C unless otherwise stated. The typical parameters are for design guidance only and are not tested.

Work around

2. Module: Analog-to-Digital Converter (ADC)

The Reset value for the ADCON0 register is updated for Resets other than Power-on Reset. Changes to the table affected are listed in Table 10-4 below and are identified in bold and italic text.

Register	Address	Power-on Reset	MCLR Reset, WDT Time-out, Wake-up On Pin Change, Wake-up on Comparator Change
W	_	qqqq qqqu(1)	qqqq qqqu(1)
INDF	00h	xxxx xxxx	սսսս սսսս
TMR0	01h	XXXX XXXX	uuuu uuuu
PCL	02h	1111 1111	1111 1111
STATUS	03h	0001 1xxx	10uq quuu ⁽²⁾
FSR	04h	100x xxxx	10uu uuuu
OSCCAL	05h	1111 111-	uuuu uuu-
PORTB	06h	xx xxxx	uu uuuu
PORTC	07h	xx xxxx	uu uuuu
CM1CON0	08h	1111 1111	<u>uuuu</u> uuuu
ADCON0	09h	1111 1100	<i>11</i> 11 1100
ADRES	0Ah	XXXX XXXX	uuuu uuuu
CM2CON0	0Bh	1111 1111	<u>uuuu</u> uuuu
VRCON	0Ch	0011 1111	uuuu uuuu
OPTION	—	1111 1111	1111 1111
TRISB	_	11 1111	11 1111
TRISC	_	11 1111	11 1111

TABLE 10-4: RESET CONDITIONS FOR REGISTERS - PIC16F506

 $\label{eq:logend:loge$

Note 1: Bits <7:1> of W register contain oscillator calibration values due to MOVLW XX instruction at top of memory.

2: See Table 10-5 for Reset value for specific conditions.

Work around

3. Module: Electrical Characteristics

The min. and max. values in Table 13-1 for Internal Voltage Reference (VIVRF) have been revised. Changes to the table are listed below and identified in bold and italic text.

Sym	Characteristics	Min	Тур	Max	Units	Comments
Vos	Input Offset Voltage	—	±3	±10	mV	(Vdd - 1.5V)/2
Vсм	Input Common Mode Voltage	0	_	Vdd - 1.5	V	
CMRR	Common Mode Rejection Ratio	+55*	_	—	dB	
Trt	Response Time ⁽¹⁾	—	150	400*	ns	Internal
Vivrf	Internal Voltage Reference	0.500	0.6	0.700	V	

TABLE 13-1: COMPARATOR SPECIFICATIONS

* These parameters are characterized but not tested.

Note 1: Response time measured with one comparator input at (VDD - 1.5)/2, while the other input transitions from Vss to VDD - 1.5V.

Work around

None.

4. Module: Electrical Characteristics

The typ. value at 5V VDD and the max. values at 2V and 5V VDD have been revised as shown in Table 2 below.

TABLE 2:	ICMP
----------	------

DC Characteristics			Standard Operating Conditions (unless otherwise specified) Operating Temperature $40^{\circ}C \le TA \le +85^{\circ}C$ or $-40^{\circ}C$ to $125^{\circ}C$				
Param No.	Sym	Characteristic	Min Typ ⁽¹⁾ Max Units Condi			Conditions	
D023	ICMP	Comparator Current ⁽²⁾		15 60	26 76	μΑ μΑ	VDD = 2.0V (per comparator) VDD = 5.0V (per comparator)

Note 1: Data in the Typical ("Typ") column is based on characterization results at 25°C. This data is for design guidance only and is not tested.

2: For standby current measurements, the conditions are the same as IDD, except that the device is in Sleep mode. If a module current is listed, the current is for that specific module enabled and the device in Sleep.

Work around

5. Module: Electrical Characteristics

The max. values at 2V and 5V VDD for LP Oscillator IDD at 125° C have been revised as shown in Table 3 below.

TABLE 3: LP OSCILLATOR 125°C IDD

DC Characteristics				-	-		unless otherwise specified) ≤ +125°C (extended)
Param No. Sym. Characteristics			Min.	Typ ⁽¹⁾	Max.	Units	Conditions
D010	Idd	Supply Current ^(2,3)	_	11	24	μΑ	Fosc = 32 kHz, VDD = 2.0V
			—	38	110	μA	FOSC = 32 kHz, VDD = 5.0 V

Note 1: Data in the Typical ("Typ") column is based on characterization results at 25°C. This data is for design guidance only and is not tested.

2: The supply current is mainly a function of the operating voltage and frequency. Other factors such as bus loading, oscillator type, bus rate, internal code execution pattern and temperature also have an impact on the current consumption.

3: The test conditions for all IDD measurements in active operation mode are: OSC1 = external square wave, from rail-to-rail; all I/O pins tri-stated, pulled to Vss, T0CKI = VDD, MCLR = VDD; WDT disabled unless noted otherwise.

Work around

None.

6. Module: Comparator Voltage Reference

Table 13-2 in data sheet DS41268**D** should read as follows:

TABLE 13-2: COMPARATOR VOLTAGE REFERENCE (VREF) SPECIFICATIONS

Sym	Characteristics	Min	Тур	Max	Units	Comments
CVRES	Resolution	_	VDD/24* VDD/32		LSb LSb	Low Range (VRR = 1) High Range (VRR = 0)
	Absolute Accuracy ⁽²⁾	_	_	±1/2* ±1/2*	LSb LSb	Low Range (VRR = 1) High Range (VRR = 0)
	Unit Resistor Value (R)	_	2K*	—	Ω	
	Settling Time ⁽¹⁾	_	—	10*	μS	

* These parameters are characterized but not tested.

Note 1: Settling time measured while VRR = 1 and VR<3:0> transitions from 0000 to 1111.

2: Do not use reference externally when VDD < 2.7V. Under this condition, reference should only be used as a comparator input with all input common mode voltage range limitations observed.

Work around

APPENDIX A: DOCUMENT REVISION HISTORY

Rev A Document (06/2009)

New errata for part number PIC16F506. Previously in PIC12F510/PIC16F506 Errata (DS80268).

Data Sheet Clarifications: Updated this document with the new format. Added Modules 4 and 5, Electrical Characteristics. Other minor edits.

Rev B Document (08/2009)

Updated the title of the errata.

Data Sheet Clarifications: Added Module 6 (Comparator Voltage Reference). Other minor edits.

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

QUALITY MANAGEMENT SYSTEM CERTIFIED BY DNV ISO/TS 16949:2002

Microchip received ISO/TS-16949:2002 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEEL00® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
